

SEASONS

preparatory

what is season?

WHAT IS THE SEASON?
THE YEAR OF THE EARTH IS DIVIDED INTO
FOUR SEASONS. THERE ARE FOUR
SEASONS IN A YEAR, WHICH ARE SUMMER,
AUTUMN, WINTER, AND SPRING. THE
SEASONS CAUSE SIGNIFICANT CHANGES IN
THE WEATHER AND OUR ENVIRONMENT.
THE SUMMER IS HOT AND THE WINTER IS
COLD. LEAVES CHANGE THEIR COLOR TO
PALE YELLOW IN THE AUTUMN.

summer

A photograph of a sunset or sunrise over a range of mountains. The sky is filled with warm colors, transitioning from deep orange at the horizon to a lighter, pale yellow and then a soft blue at the top. The mountains in the foreground are dark and silhouetted against the bright sky. In the middle ground, more mountain ranges are visible, their peaks catching some light. The overall atmosphere is peaceful and scenic.

Summer is hottest among the four seasons. In this seasons, the days are longer than the nights. When summer arrives in the southern hemisphere, then it is winter in the northern hemisphere. Many crops, like wheat, are harvested near the summer end.

autumn

Autumn is the conversion period between the summer and the winter. This season arrives as the summer ends. In this season the temperature starts to drop until winter arrives. Leaves of the trees fall and change their color to pale yellow.

winter

A landscape photograph of a winter scene. In the foreground, there is a snow-covered ground with some low-lying plants. Behind them, several trees are heavily laden with white snow, their branches drooping under the weight. The sky above is a soft, pinkish hue, suggesting either sunrise or sunset. The overall atmosphere is serene and cold.

Winter is the coldest season. It snows in many places during the winter. We change our lifestyle to live comfortably in winter. We try to insulate our bodies with coats to keep our bodies warm. Many people enjoy drinking coffee in the winter. The nights of the winter are longer than a day. Many animals migrate from one place to other to reach the warmer areas.

spring

MUCH LIKE AUTUMN, SPRING IS THE CONVERSION PERIOD BETWEEN SUMMER AND WINTER. BUT, THIS TIME THE TEMPERATURE STARTS TO INCREASE IN THE SPRING. IT IS THE VERY BEAUTIFUL SEASON AMONG ALL OTHER. IT IS SOMETIMES CALLED THE SEASON OF REGROWTH. IN THIS SEASON, TREES START TO GROW NEW LEAVES AND SEEM TO COME TO THEIR LIVES AGAIN.
